GLOSSARY OF ABBREVIATIONS

| | |
|-----------|---|
| APROSAIC | Association of settlers for the economic, social and cultural development of the village of Santa Cruz de la India and nearby communities |
| CAPS | Potable Water and Sanitation Committee. |
| MARENA | Ministry of the Environment and Natural Resources |
| MEM | Ministry of Energy and Mines |
| SILAIS | Local system of comprehensive health care |
| NGO | Non-governmental organizations |
| INIFOM | Nicaraguan Institute for Municipal Development |
| INATEC | National Technological Institute |
| ENATREL | National Electricity Transmission Company |
| UNI | University of Engineering |
| UNAN León | National University of León |
| ESIPSA | Professional internal security company S.A. |
| EIA | Environmental Impact Assessment |
| INAFOR | National Forestry Institute |
| DAEM | Explosives and Weapons Directorate |
| ENACAL | Water and Sanitation Company |
| COPTRAMIN | Cooperative of Production and Work of Traditional Artisanal Miners of La India Community |

Condor Gold has developed an internal prevention protocol with our employees, which includes sanitary measurements within the installations and towards the surrounding communities, such as:

- Talks given and written pamphlets on sanitary measurements and COVID-19 prevention were distributed to employees.
- Avoid social gatherings as much as possible and promote social distancing in common areas.
- Use of masks for employees is obligatory in the installations and villages.
- Cleaning outside and inside of vehicles after each use.
- Alcohol spray (small) is distributed for all employees and for desk/computer cleaning.
- Benzalkonium chloride is distributed for all the employees to use in their houses to clean surfaces.
- Disinfectant booth, washing hands, shoe disinfection and thermometers are used at the entrance of the offices.
- Suppliers are met outside the office areas to reduce contact with employees.
- Guidelines for kitchen area and cleaning procedures have been modified and the use of common items has been eliminated.
- Villagers in the social programs and local schools have received talks, as well as sanitary supplies (alcohol, chlorine, etc).

As of November 2020, Condor Gold regained normal activities, all employees working full time, but with sanitary measurements and social distancing and sanitary measurements being implemented to avoid spreading of Covid-19 and ensure the safety and health of its employees and surrounding communities.

Executive summary

Condor continues to implement its Environmental and Social Management System, which includes Environment, Community, Health and Safety, and Human Resources. Activities were resumed in November with sanitary measurements and social distancing at work.

Environmental work focused on monitoring: groundwater and surface water level, weather parameters, water management, waste management, and recycling, maintenance of tree nursery "Oro Verde" and 5 reforestation areas located in La India and 2 in Real de la Cruz concessions. Implementation of Participatory Water Monitoring Program including water quality sampling in La India, America, and Tatiana projects. Daily 5-minute talks to environmental workers until August, support to the administrative area; environmental awareness activities with co-workers and Institutions of the state, support to León zoo as part of the Biodiversity program were also undertaken.

Other activities included delivery of environmental quarterly reports to government institutions, baseline studies advanced on SWWB with final draft level design, follow up on kinetic study for ARD, river sediment sampling, coordination of water project and its environmental application process. A forest inventory was carried out in the land-fill area donated to Santa Rosa el Peñón Municipality, obtaining permits for cutting trees issued by INAFOR for Mina La India and Tatiana Projects, as well as a permit from INAFOR for the use of 3 chainsaws, execution of tree cutting plan in plant and office sector of Mina la India mining project, environmental supervision during drilling campaign.

"Oro Verde" tree nursery has a total of 6,419 plants, which are watered, fertilized, and kept clear of weeds and pests as part of its maintenance program. Reforestation activities in areas included cleaning, fertilizing, watering, and pest control. A total of 637 trees were planted in Nance Dulce and Real De La Cruz concession.

The social area continues to work on maintaining its social license with communities neighboring the mining project through various relationship programs and several communication actions with stakeholders. Company's relationship programs: Contributions and Donations, addressing issues related *inter alia* to education, health, sports, community mourning; during this period, 117 contributions were delivered to individuals and organizations. Agua Fresca program benefits 433 families from Santa Cruz de la India, Agua Fría and 26 property owners. Seniors program has 83 members; APROSAIC -works with the communities neighboring the project; Agua es Vida program, which has 180 members; Businesses program, with 77 entrepreneurs; Youth en Acción program, which benefits 21 youth; and Happy Childhood, which benefited 36 children. For this quarter, focus was mainly on supporting community health in Covid-19 prevention activities.

This quarter we carried out activities that allowed us to maintain good relations with communities, generating trust and ownership with the project, such as coronavirus prevention campaigns and actions through all programs, starting with ourselves and thus, serving as an example to the community.

This quarter, an important support was provided to land acquisitions team to advance the Company's strategy for properties acquisition; the company also conducted annual meetings with all social programs, reminding its member's contributions and efforts made during the year. Also, the company continues to support training and capacity building of its employees, providing financing and scholarships for English courses, and Master's programs.

1. INTRODUCTION

This report is part of Condor Gold's commitment to continuous improvement and monitoring of the implementation of its Environmental and Social Management System (ESMS) in the areas of Environment, Social and Community Relations, and Human Resources; ensuring transparency with its shareholders and relevant stakeholders.

2. OBJECTIVE

To inform stakeholders about the implementation of the Environmental and Social Management System in the areas of Environment, Social and Community Relations, and Human Resources during the third quarter of 2021.

3. ENVIRONMENTAL ACTIVITIES

3.1. ENVIRONMENTAL MONITORING

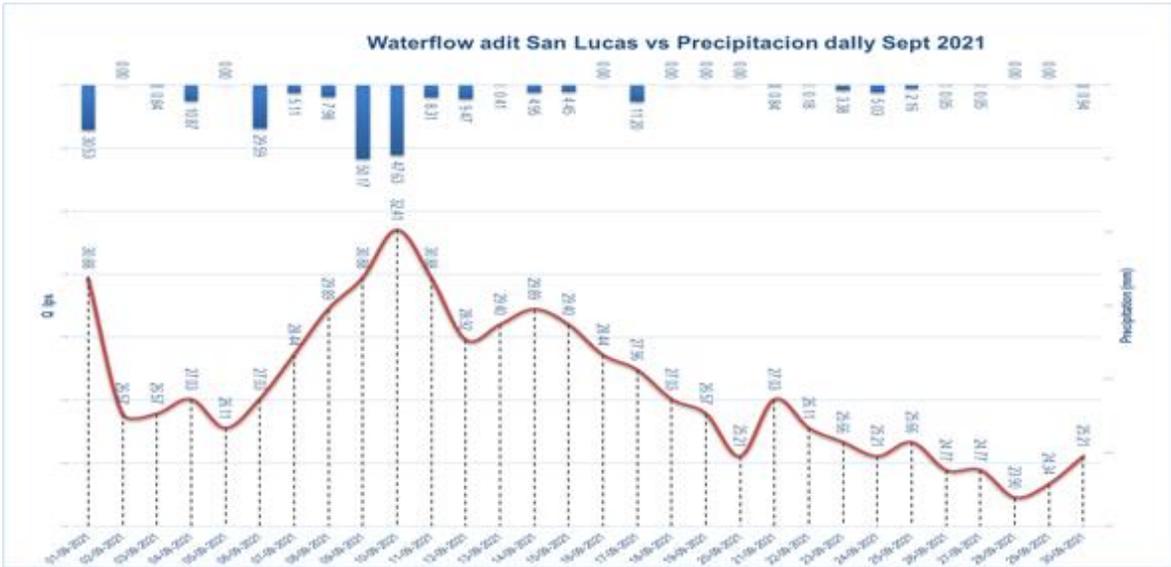

3.1.1. Baseline studies

Condor Gold continues conducting groundwater level and surface water flow monitoring, as well as gathering weather data from its digital weather station and three rain gauges (La India, Agua Fría, and La Mestiza locations).

3.1.1.1. *Surface waterflow*

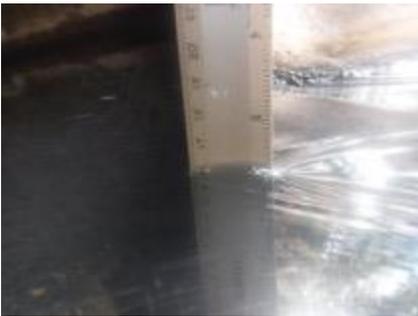

Monitoring of weirs continues. Constant water flow is only present in San Lucas V-notch weir (LIWR001). During this quarter, there has been a shortage of rain which has influenced the behavior of levels and flows in different monitoring sites. Only in September rainfall events are in the normal range.

In San Lucas V-notch weir, with an average water level of 14.47 cm (LIWR001) (Photos 2.2.1.a-e), Water level fluctuates in the range of 13.9 to 15.7 cm. These values represent flow rates in the range of 23.4 to 32.41 lps (liter per second). The maximum flow values are between 06 to 19 September, because of continuous rainfall during this same period, descending average values in the last week of the month (graph 3.1.1.1a). The following graph shows the San Lucas's flow behavior in the weir vs daily precipitation, values indicate an increase in flows due to constant rainfall at regional level.

Graphic 3.1.1.1a: Flow behavior vs daily rainfall in San Lucas Ocotillo tunnel

The behavior of water levels at the surface water monitoring sites at the end of the quarter can be seen in the following images.

Photograph 3.1.1.1.a-e. (a) San Lucas V-notch weir (LIWR001) taken on 10nd Sept and (b) La Simona Trapezoidal weir (LIWR002) taken on 13rd Sept, (c) La India Rectangular weir (LIWR004), (d) Alcantarilla / culvert and (e) sewer /culvert TSF. taken on 13rd Sept.

3.1.1.2. Groundwater level monitoring

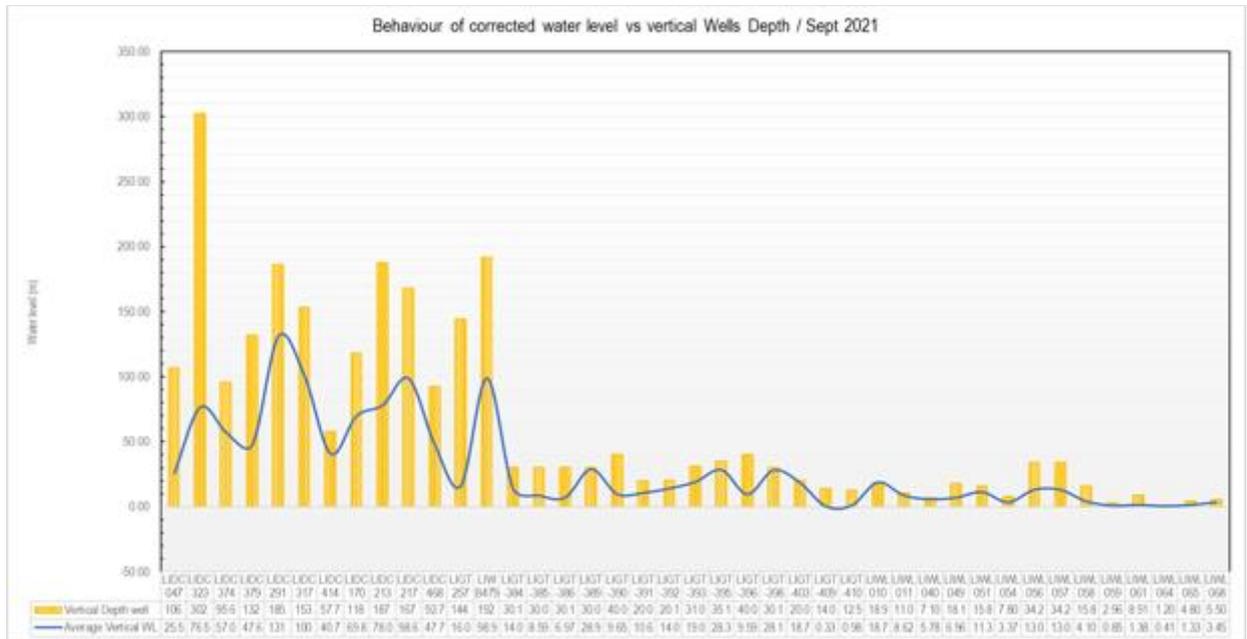

Weekly monitoring continues. In total, 41 sites have been monitored: 27 sites continued to be monitored this quarter as part of the systematic monitoring and 14 sites piezometers located in the geotechnical drilling (TSF).

In July, according to systematic monitoring, 8 sites shown a slight increase in water levels, which are established in a range of 0.02 to 1.06m, with the highest value being LIWL056 and LIGT257, in the case of decreases these are placed in the range from 0.01 to 1.01 m, with the highest value being LIDC374 and LIWLO68, the latter corresponding to its current use by its owner. However, for both America (LIDC 291) and La India pits (LIDC 317) levels remain stable with minimal variations in the order of 0.01 and 0.08 m. The TSF piezometers show stability with a maximum variation of 0.72 M for LIGT409 at the La Simona site, this decrease is probably due to water withdrawals from settlers who use water for artisanal mining processes, affecting those piezometers located in the La Simona dam sector. TSF for tail dam: stability is shown in water static levels, this depends on rain's behavior, which to date has been little in the area.

In August, a behavior of groundwater is maintained according to the geomorphological characteristics (elevations and location) that prevail in the areas of the monitoring sites, the raw water level data represent the conditions of the static level of the raw water. To deep groundwater, there is a variation in levels between -0.74 and 1.06 m, both the LIDC468 and LIDC170 wells show slight decreases (-0.74 and -0.15 m) being not very significant, about recovery, the LIDC291 and LIDC213 wells present Elevation at the level of 0.5 and 1.06 m respectively, the same because of water infiltration by the rains of the month, the rest of the wells show stability and slight rise.

In the case of intermediate waters the wells that present deep water levels and therefore little water column correspond to LIGT 390, 398, and 403; For the first two this condition is due to their location since they are established in the upper zone of the TSF with elevations higher than 480 m.a.s.l, in the case of LIGT403 it is in the intermediate zone of the La Simona dam, probably the condition of Scarcity of water is due to the geological environment where it is established (local faulting) which favors a rapid decrease in the water level and in the case of subsurface waters The values indicate fluctuations in the range of -2 to 2 m, this probably due to the use of water by their owners prior to the registration of the information, however in the general context the static water level values remain without significant variation respect to the weekly values which are shown in table 2.1.2.c. with water column between 0.5 – 21 m.

In September, groundwater behavior is similar to the previous month, due to the scarcity of rain, which indicates that there are no fluctuations or abrupt changes in water levels. The following graph shows the current behavior of the levels in relation to the different monitored piezometers.

Graphic 3.1.11.b: Behavior of water levels with corrected data in the 41 monitoring sites (average data)

3.1.1.3. Weather data

During the quarter, Condor continued registering data from the weather station and three rain gauges located in Agua Fría village, La India within La India concession and one in Espinito-Mendoza concession.

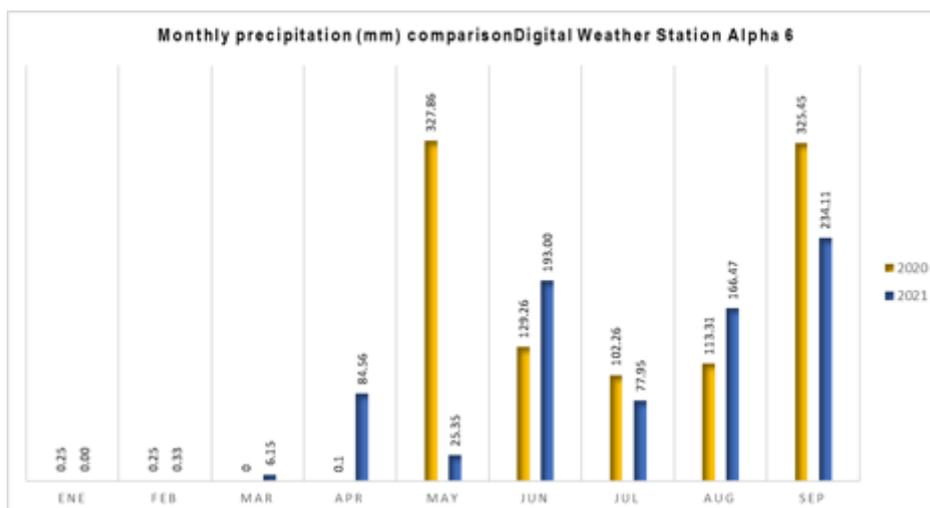

Based on Condor’s weather station, the following data was registered during this quarter:

| Parameter | July | August | September |
|--------------------------------|-------|--------|-----------|
| Rainfall (mm) | 77.0 | 166.47 | 234.11 |
| Temperature maximum °C | 27.79 | 35.00 | 26.32 |
| Temperature minimum °C | 22.87 | 19.39 | 23.15 |
| Relative humidity maximum (%) | 93.1 | 93.5 | 92.8 |
| Relative humidity minimum (%) | 30.3 | 28.6 | 64.3 |
| Predominant wind direction (°) | NW | NW | NW |
| Average wind speed (m/s) | 11.17 | 4.73 | 7.94 |

The rain gauges registered the following precipitation:

| | July | August | September |
|-----------------|-------|--------|-----------|
| La India (mm) | 74.93 | 179.32 | 213.36 |
| Agua Fría (mm) | 60.2 | 120.7 | 192.8 |
| La Mestiza (mm) | 67.06 | 218.95 | 222.25 |

The following graph shows the behavior of rainfall according to record.

3.1.1.4. Acid Rock Drainage kinetic study

As part of the environmental baseline studies, and Condor's commitment to implementing international standards, a detailed analysis was implemented with a geochemistry expert. The study is a on-site experiment to determine the potential for ARD and metals leaching in the waste rock that will be generated during the lifetime of the mine, by exposing samples of waste rock from cores to normal climatic conditions (rain) considering different types of rocks from the main projects. Leachates are then collected and analysed.

Between August 06th and 10th, communication was established with SRK and the Biotechnology Laboratory, for inquiries about the results of the analysis of the first sampling, then SRK recommends locating a detection limit for metals lower than that established in national standards, (0.001 mg / L and 0.01 mg / L suggested by SRK), additionally it is recommended to extend the analyzes to unfiltered samples as comparison data that they require in their analysis and development of the model for the study.

The weekly review of water volume accumulation for leachate sampling continues.

In September: LIGSA and SRK redefined a new strategy to obtain a greater number of water samples and achieve objectives required for ARD model adjustment. Weight considerations are as follows:

- Local laboratories use very high detection limits for metal analysis, meaning that the results to date (two samplings) are not enough to enter the modeling that SRK is carrying out.

- From the above, SRK recommends carrying out the analyzes with another laboratory, in this case at SGS Canada, where LIGSA begins shipping the water samples from the date on.
- The lack of rainfall in recent months, which has affected the collection of water volumes in the reactors, therefore a new sample collection protocol is established, generating volumes of water through an irrigation process with artificial water, this process will be applied as a complement to the lack of rain, irrigating each reactor when required with a volume of 2 liters per day without rain.

On 27th Sep: The first sample - product of accumulated rainfall in previous days- was taken, sent to laboratory on September 29th, LIGSA will be keeping track of the samples collected and sent for analysis, this will be shared simultaneously with SRK.

Monitoring and sample shipments are being scheduled weekly for shipment to SGS laboratory in Canada.

3.1.1.5. Dewatering project

In September:

SRK recommends re-drilling the area of the old well 800 in the cooperative's area, LIGSA evaluates the viability of this proposal and defines high risk for being a currently active artisanal mining area associated with the Cooperative, and the cost of security that is required for the drilling rig increases budget, also considering that this area is not owned by the company.

Drilling site evaluation in well 800 zone

LIGSA defines with SRK the steps to follow to complete the hydrogeological feasibility study within the framework of the DEWATERING project:

Hole cleaning LIDC178

Perform quick water injection test, if positive perform a test with level logger programming using selected piezometers

Begin drilling in PQ of well to intercept San Lucas tunnel, according to SRK's proposal with the location of a new site to the North of the axis taking as reference the initial well LIWB479

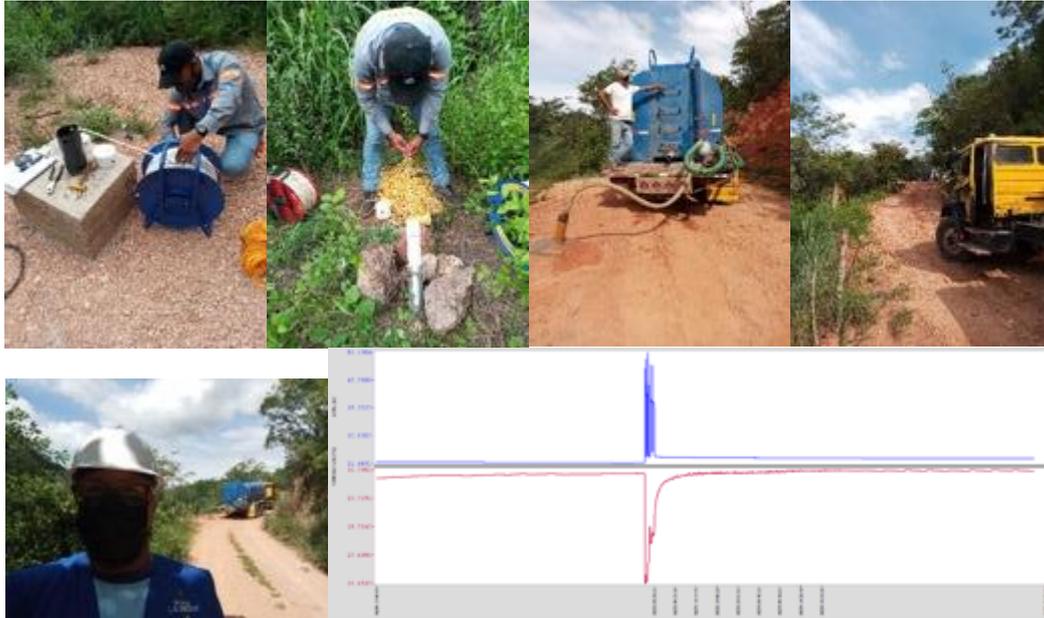

Perform rapid water injection test, if positive proceed if positive perform a test with the programming of level recorders using selected piezometers, if negative start second drilling south of the tunnel, taking the reference of the initial well and perform the tests.

The LIDC178 hole cleaning begins, ending on the 19th with the rapid test, which was positive, with a flow rate of 13.2 liters per second

Quick injection test

Water injection test begins with logger installed in reference piezometers (LIDC317, LIDC217, and LIDC170), obtaining results on September 24th and sharing with SRK for its evaluation, being positive and demonstrating a connectivity of this well to San Lucas tunnel with a flow of 10.40 lps (twice as much as requested by SRK). However, SRK continues to maintain the proposal to seek the connection outside the pit area in the LIWB 479 well area.

Water injection test with logger record

| N° Water truck | Volume m3 | Star time | End time | Time (min) |
|----------------|-----------|-----------|----------|------------|
| 1 | 14 | 08:23:00 | 08:41:00 | 18 |
| 2 | 13.2 | 08:43:00 | 09:02:00 | 19 |
| 3 | 11.73 | 09:05:00 | 09:21:00 | 16 |
| 4 | 14 | 09:40:00 | 10:04:00 | 25 |
| 5 | 13.2 | 10:10:00 | 10:38:00 | 28 |
| Tot = | 66.13 | | | 106 |
| | Flow = | 10.40 | lps | |

PQ drilling begins at the north point of the San Lucas tunnel axis to demonstrate the connection and ensure rapid injection test for verification; it is expected to end on October 1st.

North drilling site location

LIGSA continues to evaluate results in the framework of drilling and studies proposed to achieve the project objective.

3.2. ENVIRONMENTAL MANAGEMENT

Condor continues implementing its Environmental and Social Management System, in compliance with internal policies and international standards. Condor was working until August, due to covid infections in the community, house /fieldwork shift was implemented; however, the environment area was working 70% in offices due to follow-ups mainly to the tree cutting plan and studies that hydrology is monitoring and in 100% fieldwork.

The Environmental Management System is implemented with the following activities: monitoring of groundwater and surface water level, monitoring of: weather parameters, water management, execution of activities within dewatering framework. Also, waste management and recycling, maintenance of tree nursery "Oro Verde", maintenance of 5 reforestation areas located in La India and 2 in Real de la Cruz concessions, execution of a tree cutting plan in the plant and office sector of the Mina la India mining project; implementation of the water quality sampling in La India, America and Tatiana projects ; daily 5-minute talks to environmental workers until August; support to social team, project area, land acquisition area and administrative area; environmental awareness activities with co-worker and State institutions; and support to León zoo as part of the Biodiversity program.

Other activities included delivery of the environmental quarterly reports to government institutions, baseline studies advance on SWWB, follow up on the kinetic study for ARD, river sediment sampling, coordination of the water project and its environmental application process, A forest inventory was carried out in the garbage area donated to the Municipality of Santa Rosa el Peñón, obtaining permits for cutting trees issued by INAFOR for the Mina La India and Tajo Tatiana project, as well as a permit from INAFOR for the use of 3 chainsaws, environmental supervision during drilling campaign, cleaning and maintenance in areas of the company such as: alpha 6, alpha 3, water plant sector, viewers, among others.

3.2.1. Environmental Management System implementation

3.2.1.1. Environmental Awareness

This quarter in environmental awareness, no water results have been presented throughout the year, due to covid19 , 5-minute talks were held during July and August about safety, environmental and social issues, activities related to reduction of non-hazardous solid waste with the support of MARENA (implementation of non-use of plastic bags) were stopped, the next few months environmental education activities were carried out with the support of the social area through audios, videos and material alluding to education delivered to company workers and actors of the different social programs.

Other activities related to environmental awareness were the food donation to Leon's Zoo.

T-shirts and snacks were also delivered to INAFOR and MARENA in support of the national reforestation activities, plan implemented by these Institutions.

1.1.1.1. Waste management program implementation

During this quarter, activities related to waste management continued at the La India concession and company's facilities.

During this quarter, 1,200 pounds of general waste were collected; 600 lb of organic waste was sent to the composting area within the company. Glass, paper-cardboard and plastic were stored for recycling, which were delivered to sites authorized by MARENA. Hazardous solid waste was also delivered (oil barrels, hydrocarbon barrels, hydrocarbon yarns, among others) to the Recycled Oil company, which is authorized by MARENA to handle this type of waste.

During the daily 5-minute talks, the importance of Waste Management was explained to refresh the importance of recycling and separation at source.

Photograph 3.2.1.3.(a) Signs of containers of classification of waste within the company

1.1.1.2. Soil protection and biodiversity conservation

As part of the remediation and biodiversity conservation efforts, Condor continues with its tree nursery in La India concession. Also, Condor continues implementing reforestation plans in 7.13 ha located in Nance Dulce, Soledad de la Cruz and Los Rastrojos villages under agreement with landowners and Alpha 6 - a property of the company. During this quarter, reforestation plan included maintenance activities such as watering and fertilizing, weed removal, and replacement of lost trees.

Condor continues its monthly donations to Arlen Siu Zoo in León implemented since Q4 2019, as part of Condor's commitment to biodiversity protection, mentioned in section 3.2.1.1.

In addition, as part of the soil protection program, site inspections were carried out in the areas of the drilling campaign, geotechnical drilling, and viewing points and road access areas (the latter as part of the maintenance to those areas). These inspections were carried out before, during and at the end of activities to ensure that environmental measures were implemented

and negative impacts prevented or minimized. The areas are then remediated and rehabilitated to ensure soil conservation, reduce the potential erosion process and sedimentation of rivers.

1.1.2. Tree Nursery “Oro Verde”

The tree nursery “Oro Verde” provides the trees for all reforestation areas in the Condor concessions. By the end of this quarter, a total of 6419 plants were watered, fertilized and clean from weeds and pests as part of the maintenance program of the tree nursery Oro Verde.

There was an increase in the inventory of the plants because this quarter we have bought new seeds, they have started to germinate and the new plants have been monitored and maintained, also this quarter we have managed to reduce the pests that affect the plants by buying and applying insecticide for it.

Photograph 3.2.2.. a. Maintenance of tree nursery “Oro Verde”

Activities in the reforestation areas included cleaning, fertilizing, watering, pest control. A total of 637 trees were planted in the reforestation area of Nance Dulce and Real de la Cruz Concession.

1.1.3. Implementation of reforestation plans and activities

As part of the commitment to the reforestation of 200,000 plants to which India Gold S.A. It was committed in the EIA before MARENA, and according to the agreement that was reached before this Instance, 3,800 plants have been donated to Institutions such as INAFOR 3,800 plants, this being taken into account as compliance with the environmental permit specifically in the condition on the commitment and reforestation that we adopt to the country for the execution of the exploitation projects.

1.1.3.1. La India concession – reforestation activities

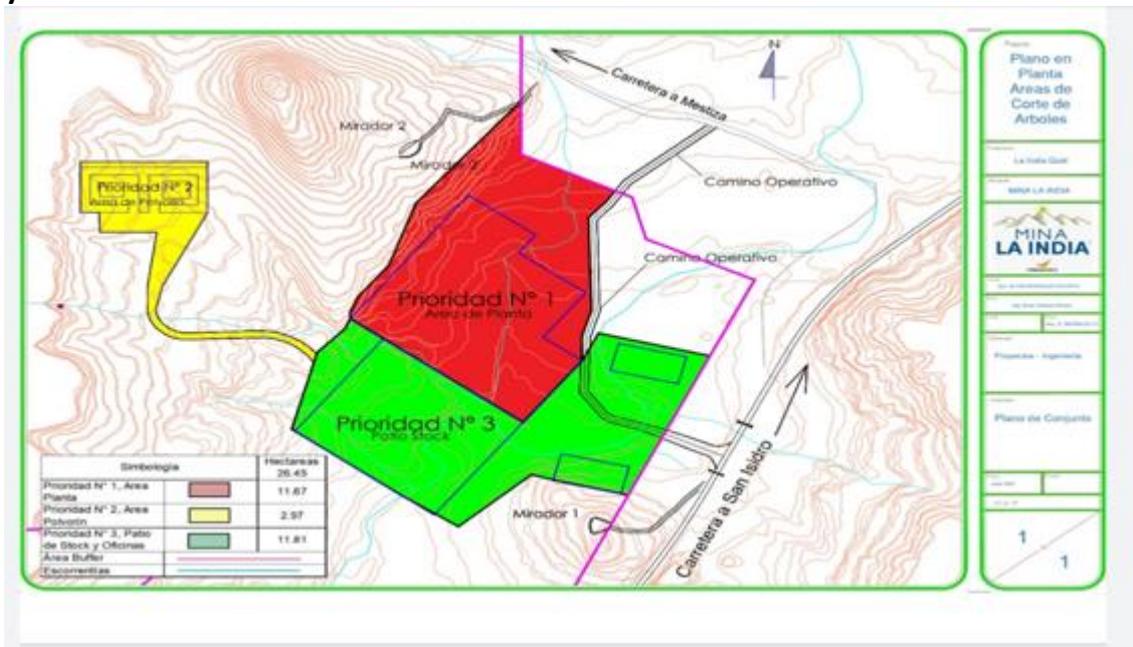

Maintenance of reforestation areas in Nance Dulce, Los Rastrojos, and within the company's property ALPHA 6, continues. This activity is required to ensure the survival of the trees planted and are part of the environmental commitments of the company in La India environmental permit.

Activities in the reforestation areas included cleaning, fertilizing, watering, pest control. A total of 68 trees were planted in the reforestation area of Nance Dulce.

Photograph 3.2.3.1. a. Maintenance of reforestation areas in Nance Dulce

3.2.3.2 Tree Cutting plan in the sector of the beneficiation plant, office area, and stock yard

Start of tree cutting in the Plant sector on August 3rd, 2021, that same day an induction talk on cutting techniques and maintenance in chainsaws was coordinated from 8:00 am, given by Mr. Anthur Obando and Porfirio Urbina, Sawmill workers.

To reinforce the use of chainsaw and maintenance of the same, another training carried out on August 6th, 2021 was coordinated with Casa McGregor

Results obtained from cutting trees in August

Tree cutting in the plant sector was projected to be carried out within two months, achieving a percentage of almost 50% of cutting, which has been a great effort from the environmental field staff despite rain.

Total number of trees cut in August was 433 and 778 posts were obtained from these trees.

In september the cutting continued in the plant area, for the first ten days of September the following had been carried out:

| | |
|---|--|
| % Advance with respect to the plant area (6 Ha), advance of 4.96Ha | 82.6% |
| % of Progress with respect to the cutting permit (193.30 Ha) _LIGSA_Santa Rosa del Peñón No _0000012422 | 2.56% |
| No. of trees cut in the 4.96 Ha | 562 |
| Approximate Tm ³ of woody material (average 10.4561 Tm ³ / Ha): | 51.862 Including firewood, weeds, poles. |
| No. of posts extracted from cut trees: | 985 |

After the national holidays week, the cutting of trees continued, changing the order of priority, after the plant sector it would continue with a stock yard and offices, the following results were obtained as of September 24th:

| | |
|---|--------|
| % Advance with respect to the plant area (6 Ha), advance of 6 Ha and 770 m of perimeter of the storage area | 100% |
| % of Progress with respect to the cutting permit (193.30 Ha) _LIGSA_Santa Rosa del Peñón No _0000012422 : | 3.87% |
| Approximate Tm ³ of woody material (average 10.4561 Tm ³ / Ha): | 70.788 |

Cutting activities are currently being continued in the office area starting on September 23ed, 2021

Among the cutting activities is the cleaning of weeds and removal of woody material, poles that will be used for property fencing activities, this approved in the cutting permit granted by INAFOR, woody material was donated to collaborators of India Gold / Condor S.A and community members of the area, in coordination with the environment, social area and Human Resources, this material has been donated to more than 40 families.

Firewood delivery was carried out on a Friday for community members and on weekend for company employee.

3.2 Activities in Real de la Cruz concession

1.1.3.2. Real de la Cruz concession – reforestation activities

Maintenance of the reforested area in Soledad de la Cruz village continued. Watering, weed removal, fertilizing, and pest control of trees was executed. A total of 569 trees were planted in the reforestation.

Photograph 3.2.3.2.a-c. Reforestation areas in Soledad de la Cruz village in Real de la Cruz concession

1.2. OTHER ACTIVITIES

1.2.1. Water Project for La India and Agua Fría villages

A representative of MARENA carried out a follow-up inspection of the environmental authorization issued for the Potable Water Plant Project, with representatives from the Social Area, Hydrology and Environmental officer attending such activity.

2. SOCIAL ACTIVITIES

2.1. STAKEHOLDER ENGAGEMENT IMPLEMENTATION

2.1.1. Meetings with local stakeholders

During this quarter, the company held more than 40 meetings with the leaders of the social programs to coordinate the activities carried out with the members of the programs and the community in general.

Main topics addressed were:

- Water program
- Senior program
- Social contributions
- Business program
- APROSAIC
- Artisanal mining
- Youth in action
- Happy childhood

2.1.2. Bilateral meetings with local stakeholders

Bilateral meetings

During this period, the company held 15 bilateral meetings, with local organizations in the Area of Direct Influence (ADI) and with NGOs and/or institutions interested in collaborating with social programs.

2.1.3. Communication campaign

During this quarter, the company continued executing communication campaigns in the communities neighboring the Project, due to the outbreak of Covid, house-to-house visits were reduced and group meetings eliminated, the communication strategy aimed at raising awareness of the importance of caring for the people in the face of the pandemic, to take

the necessary security measures and in addition, the company through its social team was providing moral support via phone and through family members of people who were with Covid, this action is seen positively by the population since in the communities there is discrimination towards families where there are people with Covid, communication resumed on the Project's Facebook and 03 social programs, YouTube and website under the same theme of Covid prevention, Project progress and execution of social activities for the benefit of people.

2.2. COMMUNITY RELATIONS PLAN IMPLEMENTATION

La India Gold developed a social investment plan oriented to generate conditions to promote better community relations in the areas of direct and indirect areas of influence of the project; with a focus on water, communication, support for small mining, among other contributions and program.

During the quarter, the investment was **US \$ 45,294.46** in the following items:

| SOCIAL INVESTMENT | | | | | |
|-------------------|------------------------------------|------------------|---------------------|------------------|------------------|
| N° | Area | July | August | September | Total |
| 1 | Communication | 4,196.00 | \$ 4,459.68 | \$ 3,686.92 | 12,342.60 |
| 2 | Water | 1,126.00 | 2,382.21 | 3,327.21 | 6,835.42 |
| 3 | Artisanal Mining | 4,091.00 | 2,428.05 | 2,010.23 | 8,529.28 |
| 4 | APROSAIC | 2,073.00 | 1,088.94 | \$ 1,290.75 | 4,452.69 |
| 5 | Seniors | 1,379.00 | 1,672.20 | 1,765.94 | 4,817.14 |
| 6 | Small business | 600.00 | 600.00 | 600.00 | 1,800.00 |
| 7 | Others | 2,513.00 | 1,740.77 | 1,886.73 | 6,140.50 |
| 8 | Tatiana and America social license | 198 | 105.27 | 73.56 | 376.83 |
| Total | | 16,176.00 | \$ 14,477.12 | 14,641.34 | 45,294.46 |

Table # 1. Social investment III quarter 2021

Contributions and Donations Program

During the months of July, August to September, contributions have been delivered as follows: transportation (8), contributions to churches (17), other donations(59), health (8), education (8), infrastructure (5), and community mourning (10).

Individuals and institutions were benefited, representing a broad reach of the program in communities.

The contributions and donations delivered in various areas are set out below:

| ITEM | ACTIVITY | BENEFICIARES | VILLAGES | MONTH |
|--------|--|--------------|-----------|-------|
| Others | Loan of an Tent for funeral | 1 | Agua Fría | July |
| | Loan of an Tent for funeral. | 1 | La India | July |
| | Lunches delivered to ENACAL's personnel as | 1 | La India | July |

Fresh Water Program in the Santa Cruz of La India community

The Agua Fresca Program was created to help the families of the communities of Santa Cruz de La India and Agua Fría consume quality water for consumption.

In the third quarter of 2021, the delivery of water from house to house in the communities continues and it is contributed with the delivery of the second jug in Santa Cruz de La India, which doubles this benefit to people.

Support was also provided to vulnerable sectors: the seniors, people with disabilities and multi-household families. With this, it supports the reduction of the problem of water shortages and intestinal diseases, providing residents with quality water for their consumption.

Despite the outbreak of the pandemic in the area, and the impact of the virus on the families of the benefited communities, the delivery of water has not stopped; The collaborators are taking prevention measures against contagions such as the use of masks, alcohol, disinfection of jugs, signaling of distancing in the delivery of the second jug and raising awareness not to lower their guard against the pandemic.

In the Santa Cruz de La India community, 5,085 cans of fresh water were delivered in this period (July to September).

Activities within the water program:

- 279 families have the benefit of receiving two cans of water weekly.
- Beneficiaries of Santa Cruz de La India have the benefit of receiving the second bottle of water of the week at a central point: Information Office.
- 5 institutions received two cans of water weekly. 4 of them for free.
- 279 families received recommendations on cleaning the bottle and dispenser to prevent virus infections.
- 275 families received recommendations on the proper care and use of the jug.
- Dispensers were delivered to new beneficiaries enrolled in the program.
- 279 beneficiaries received Covid prevention measures in the delivery of water.
- Delivery of water to new beneficiaries of the Agua Fresca program

Agua Fría village.

Agua Fría is one of the communities of direct incidence of the La India Project, where Condor Gold, through the Agua Fresca Program, has provided this benefit to the families of this community, which also suffers from the effects of water shortages and quality.

The Agua Fresca program delivers house to house and benefits 154 families in the community, and free of charge to vulnerable people such as the seniors and people with disabilities.

With the incorporation of multihome families, the number of families benefited in the community has increased, in this way all people receive the benefit; Multihome families continue to be enrolled.

Despite the outbreak of the pandemic in the area, the delivery of water continues, the collaborators are taking preventive measures.

In the community, 1,879 drums of purified water have been delivered in the third quarter of 2021.

Activities within the program:

- 154 families receive their jerrycan weekly
- 154 families received recommendations on cleaning the bottle and dispenser for virus prevention.
- 1 institution receives the jug weekly for free.
- Registration of multihome families in the Agua Fría community (5 registrations)
- Information was given on preventive measures against the Coronavirus during the delivery of the bottles.

Water purification plant.

Since the start-up of the water purification plant, the families of the communities of Santa Cruz de La India and Agua Fría have been consuming quality water produced in the community.

Every time the tank is filled, the operators of the water treatment plant carry out water quality monitoring. In this quarter, the first preventive maintenance and the water quality analysis were carried out by a specialized laboratory.

In this quarter the production has been: July: 2,577, August: 2,399, September: 3,080, For a Total: 8,056.

Business Program

In Santa Cruz de la India there are 138 businesses in different areas: Tortilla places, restaurants, bars, clothing sales, street vendors, cosmetics, etc. Currently, 80 business owners are enrolled in the program and are part of the activities carried out by the board of directors with the support of Condor Gold.

Through the program, it is intended, businesses have a dynamic economy, so Project Mina la India with the board of directors carry out activities focused on supporting the development, advancement, and growth of local businesses.

During the 3rd quarter, activities were focused on visiting businesses and promoting biosecurity measures for coronavirus prevention. Activities focused on promoting financial education were also carried out so that business owners have better management of their finances: Newsletter, campaign to reduce the use of plastic bags, one day in your business, raffle.

The projects and programs promoted through the business program continue to generate growth opportunities in the community. To date, there are Community Bank, Community Savings Program, and Community Room Leasing Project.

The 33 members of the savings program maintain their commitment in giving their biweekly payments, in the same way, the 23 members of the village bank continue to participate actively. In the community room leasing project, there are 5 business owners who have benefited from the room rental.

During the quarter, an awareness campaign was promoted to reduce the use of plastic bags for the purpose of cleaning the community.

Condor Gold through the business pro

Youth in Action Program.

During the third quarter of 2021, Jovenes en Acción program mixed its recreation with education and health.

We started with the campaign "NO more garbage, I am educated". A campaign focused on sensitizing the youth not to throw garbage in their environment, creating spaces to address educational issues like taking care take care of our environment, giving Following up on the campaign, the young people participated in a visit to the UNAN-León botanical garden to learn about the different types of forests and places where the care of our nature is promoted.

We have given young people the opportunity to learn about the culture and history of their department and we are creating spaces to dialogue on issues such as leadership and teamwork, promoting young people with leadership and management skills.

We maintain our covid-19 prevention campaign, sensitizing the young sector of the community enrolled in the program to put biosecurity measures into practice, being responsible for their health, the health of their families, and the community.

We continue to strengthen our relationship with young people and their families, due to the pandemic in the third quarter we changed our ways of carrying out the activities carried out and we began to use social networks, young people participated from their homes to avoid crowds, in that way we are using technology to continue our relationship work with this sector of the community

Happy Childhood Program.

The Happy Childhood program during the third quarter of 2021 carried out activities focused on the three axes with which the program develops its activities, creating recreational spaces that provide education, personal development in values, contributing to learning about caring for the environment, and Relationship with the families of children enrolled in the program.

We provide environmental education to children with the campaign "No more garbage, I am educated" to sensitize children to keep their community clean and contribute to the protection of natural resources, and approach children to their village's natural heritage.

In the course of the quarter, face-to-face activities were suspended as a preventive measure and thus avoid crowds, but we work with visits and activities from home, bringing the message of care to homes to avoid cases of covid-19 in their families, so We designed a communication plan with parents so that children from their homes participate in the different activities on health, environmental education, and recreation that were carried out during the quarter.

We continue with the protection campaign for the prevention of contagion in children's homes, carrying out different actions to support families and sensitize them to take measures to protect them.

The program continues to benefit the children from Mina la India, focusing the activities developed in the third quarter on the issue of prevention of covid-19, contributing to environmental education, and bringing recreational spaces to the homes of children.

INDEPENDENT ARTISANAL MINERS INVOLVEMENT GROUP

As part of the commitment to strengthen the independent artisanal miner's sector, La India Gold SA / C6ndor SA provides constant support to artisanal miners who carry out mineral extraction independently in La Mestiza, providing safety talks and making recommendations when they go to their laborers and prevent accidents that put the integrity of independent miners at risk.

Activities with a group of independent miners (MESTIZA)

During the third quarter of 2021, 66 artisanal miners organized into 13 groups were benefited from a free access agreement to La Mestiza property to carry out artisanal mining, valid until December 31, 2020.

The third-quarter production of the groups benefiting from the access agreement was 276.8 tons of mineral during the second quarter.

2.3. IDENTIFICATION OF VULNERABLE FAMILIES

Santa Cruz de la India's Seniors Program

Santa Cruz de la India has a population of 123 Seniors who are part of the most vulnerable sector of the Community. As a responsible company, Condor Gold, through the board of directors, has created spaces for dialogue and developed activities that have benefited the 89 members enrolled in the program.

The Seniors' Program has a 6-member board of directors who, in coordination with Condor Gold, plan and execute monthly activities.

July, August, and September activities were mainly focused on health, due to coronavirus.

29 food packages were delivered to the patients, 89 health kits were delivered that contained masks, vitamins, and medicines that help their health, 2 visits were made by a physiotherapist to monitor their physical and mental condition and provide recommendations to help their health.

As recreational activities, occupational therapy carried out crafts painting in clay, an activity for their mental health.

Members of the medicinal garden visited a nursery to learn about ancestral medicine.

Self-sustainable projects: Medicinal Garden and Piñatas and varieties Santa Cruz de la India are working irregularly due to coronavirus. Piñata project is not producing piñatas, they are buying to sell and the medicinal garden is finalizing the conditioning of the medicinal garden to open its new location.

2.5. INFORMATION OFFICE

These facilities are available to the general population. Hours of operation remain Monday through Friday from 8 a.m. to 5 p.m.

On Fridays, the Agua Fresca program distributes the second jug of water to the La India community at the Information Office, taking the necessary measures to prevent Covid.

In this third quarter of 2021, mainly in August and September, due to a re-outbreak of Covid in the community number of visits was reduced, and other people saw SCI as a source of contagion. Thus, a protocol was implemented, using necessary measures, giving confidence to those who visit the office.

It was also oriented to design a plan to improve the dynamics of two social team members who will begin to develop it for October. In addition, a drink will be offered to visitors at the time of being treated cordially.
